

Nergica Unveils Event Calendar

This year's program features rich content presented in an interactive formula and structured networking

Gaspé, February 22, 2021 – Nergica released the details of its annual calendar of events, specially concocted for the renewable energy industry while aiming to address the hottest topics in the sector. By focusing on interactive events and “braindates” (structured, collaborative networking sessions), these experience-oriented formulas are a far cry from your typical Zoom meetings or events!

In order to actively participate in the economic recovery while supporting the renewables industry, virtual braindates have been designed around two highly consequential areas of development in Quebec and throughout Canada: energy storage and solar power. Driven by the platform e180, these professional pairing sessions facilitate knowledge exchange and the development of business contacts, whether one-on-one or in small groups. Connect with decision-makers, entrepreneurs, developers and experts involved in renewable energy R&D.

Throughout the events, discover the latest innovations and optimization opportunities for currently available technologies in the fields of energy storage, solar power, energy transition and microgrids. Conducted by and for industry stakeholders and offered in an interactive formula, the case studies presented allow participants to apply shared knowledge in their sector. These expert-led events are geared toward problem-solving and the presentation of tools.

Storage Braindate | March 25, 2021

How can energy storage contribute to Quebec's energy transition? Come and chat with others about opportunities, challenges, solutions and innovations in this sector! By brainstorming together, we can take the energy storage sector to the next level!

To learn more, [click here](#).

Solar Braindate | May 13, 2021

Should Canada be using more solar in its energy development? Are you a stakeholder in Canada's solar PV sector? Are you interested in chatting with others about opportunities, challenges, solutions and innovations in this sector? By brainstorming together, we can take solar power to the next level!

About Nergica

Nergica is a centre of applied research that stimulates innovation in the renewable energy industry through research, technical assistance, technology transfer and technical support for businesses and communities. In concrete terms, Nergica is a non-profit organization driven by an accomplished team of experts with access to research infrastructure operating in a unique natural environment.

Firmly entrenched in the applied research networks of Quebec and Canada, Nergica collaborates closely with industry players, research centres, international authorities, developers, small and medium-sized enterprises, and communities.
